INCREASE UPTIME.

Identify problems before they occur, schedule maintenance between shifts and eliminate health and safety risks to prevent unnecessary downtime.

The image displays the JCB LiveLink web interface and a mobile app interface. The web interface shows a dashboard with a search bar, navigation menu, and a 'HEALTH ALERTS' section. A red box indicates '10 Actions' and another red box shows '6' alerts. A map view shows equipment locations with pop-up cards for HAR3DXSUCHI1608533 and JCB320TSC2421566, displaying fuel, water, and maintenance alerts. The mobile app shows a similar map view with pop-up cards for the same equipment.

ALERTS FOR ACTION
Real time alerts related to equipment health, safety and security.
Clear descriptions with required action to undertake.

REDUCE ADMIN.

Save time by completing all tasks in one system. Digitise pre-start checks, buy parts, schedule servicing and access important documentation.

The screenshot shows the LiveLink web interface for a JCB machine. The top navigation bar includes the LiveLink logo, a search bar, and a user profile icon. The left sidebar contains navigation options: Overview, Fleet, Sites, Depots, Operators, Rental, Analytics, and Dealer. The main content area displays the machine's VIN (SNI23456789XD), total hours (2313 Hrs), and source (JCB). A map shows the machine's location near Alveston. A 'SERVICE' button is visible. The 'HEALTH ALERTS' section shows 3 alerts, with the most recent one being 'Blocked Air Filter (BAF)' at 08:03:50. The 'ALERT HISTORY' section shows a list of previous alerts.

EFFORTLESS MEETS PAPERLESS

Push information into LiveLink to reduce manual data entry and the need for paper. Upload and store important documents for quick access such as compliance certificates and operator manuals. Use the machine sharing feature to provide visibility of equipment data with other users and organisations.

The screenshot shows the LiveLink mobile app interface for the same machine. The top navigation bar includes the LiveLink logo, a search bar, and a filter icon. The main content area displays the machine's VIN (SNI23456789XD), total hours (2313 Hrs), and source (JCB). A 'SERVICE' button is visible. The 'HEALTH ALERTS' section shows 3 alerts, with the most recent one being 'Blocked Air Filter (BAF)' at 08:03:50. The 'ALERT HISTORY' section shows a list of previous alerts.

MAKE BETTER DECISIONS.

Real time alerts notify you of any health or safety issues. Accurate monitoring ensures your machines are fully operational, safe, secure and earning you money.

GUESS LESS, KNOW MORE

Get a clear and consistent view of all machines in your fleet, now available in one portal. With accurate monitoring and reporting of machine usage and performance. Actionable insights and data help you reduce operational costs.

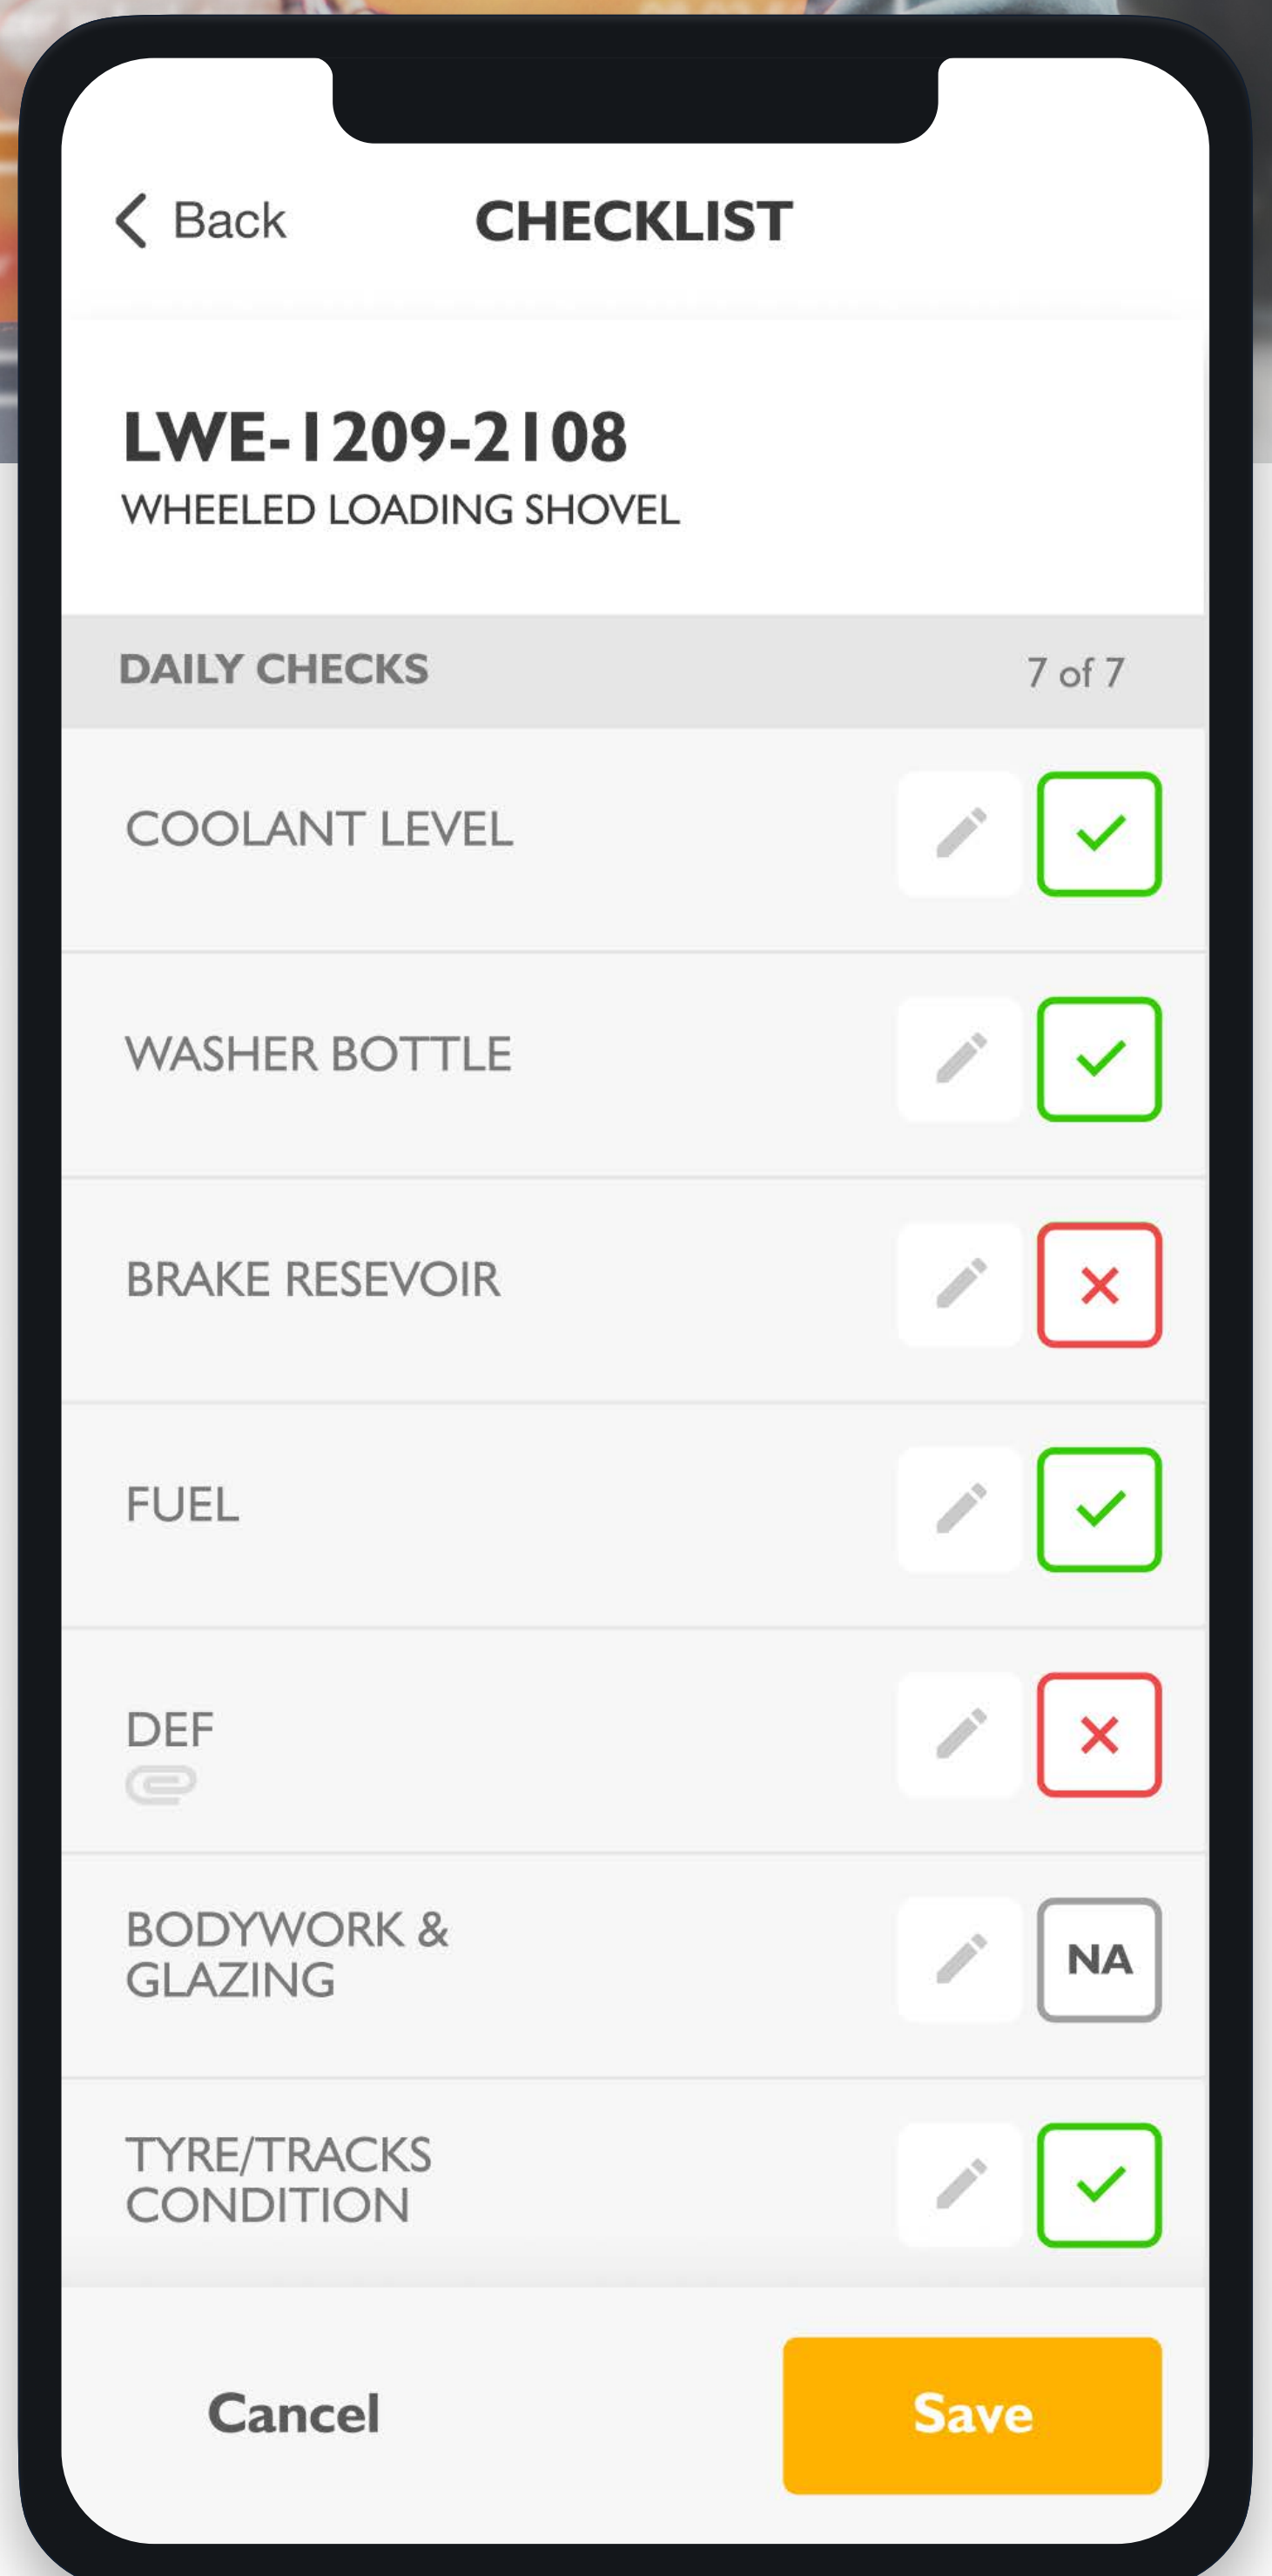

STAY IN TOUCH.

With the JCB Operator app operators can carry out pre-start checks electronically giving instant equipment updates, allowing quicker decisions and increasing uptime.

YOUR EYES EVERYWHERE

Available on both iOS and Android platforms, the JCB Operator app provides alerting in LiveLink of failed pre-start checks. Operators can take photos and add text if required aiding the resolution of any issues.

HOW LIVELINK WORKS.

The example below details the benefits LiveLink brings in a civil engineering application.

I am a fleet manager for a large contractor. I am responsible for 15 machines of varied manufacturers with 5 hired in and 20 operators across 4 sites.

I am mainly office based but use my company mobile when travelling between sites. I need to be able to access data wherever I am 24/7.

LiveLink enables me to:

Access data for all machine brands from my phone on the go.

See when stability systems have been overridden, when machines are travelling with the boom in the air* and when seat belts are not engaged.

Quickly resolve issues with health alerts providing clear descriptions such as performing a diesel particulate filter regeneration.

Instantly view pre-start checks submitted by all operators and respond to any issues.

Monitor fuel usage and act on excessive idle time, resulting in significant revenue increases.

Key Requirements:

- Health and safety of operators
- Fuel usage and carbon emission reductions
- Asset utilisation
- Productivity
- Maximising uptime

HOW LIVELINK WORKS.

The example below details the benefits LiveLink brings in an agricultural application.

I am the owner of an agricultural contracting business but also run my own farm. I own 12 machines of mixed brands – 2 Fastracs, a Loadall, a Wheeled loading Shovel a Forage Harvester and 2 other brands of tractor.

I spend most of my time in the office or with customers and spend a lot of time communicating with my operators.

At busy times of the year machines are working 18 hours a day and we do all of our service and maintenance out of hours. Uptime is critical and I use dealer servicing for machines that are in Warranty.

LiveLink enables me to:

See the location, health status and working hours of all my machines in one portal without various logins

Have my operators carry out digital daily checks so I get alerted immediately if a check is failed

Schedule service and maintenance around working periods

Be alerted to any potential issues on my machines and act promptly before they become a problem

Request uptime support from my dealer if I need it or buy parts required for servicing & repairs

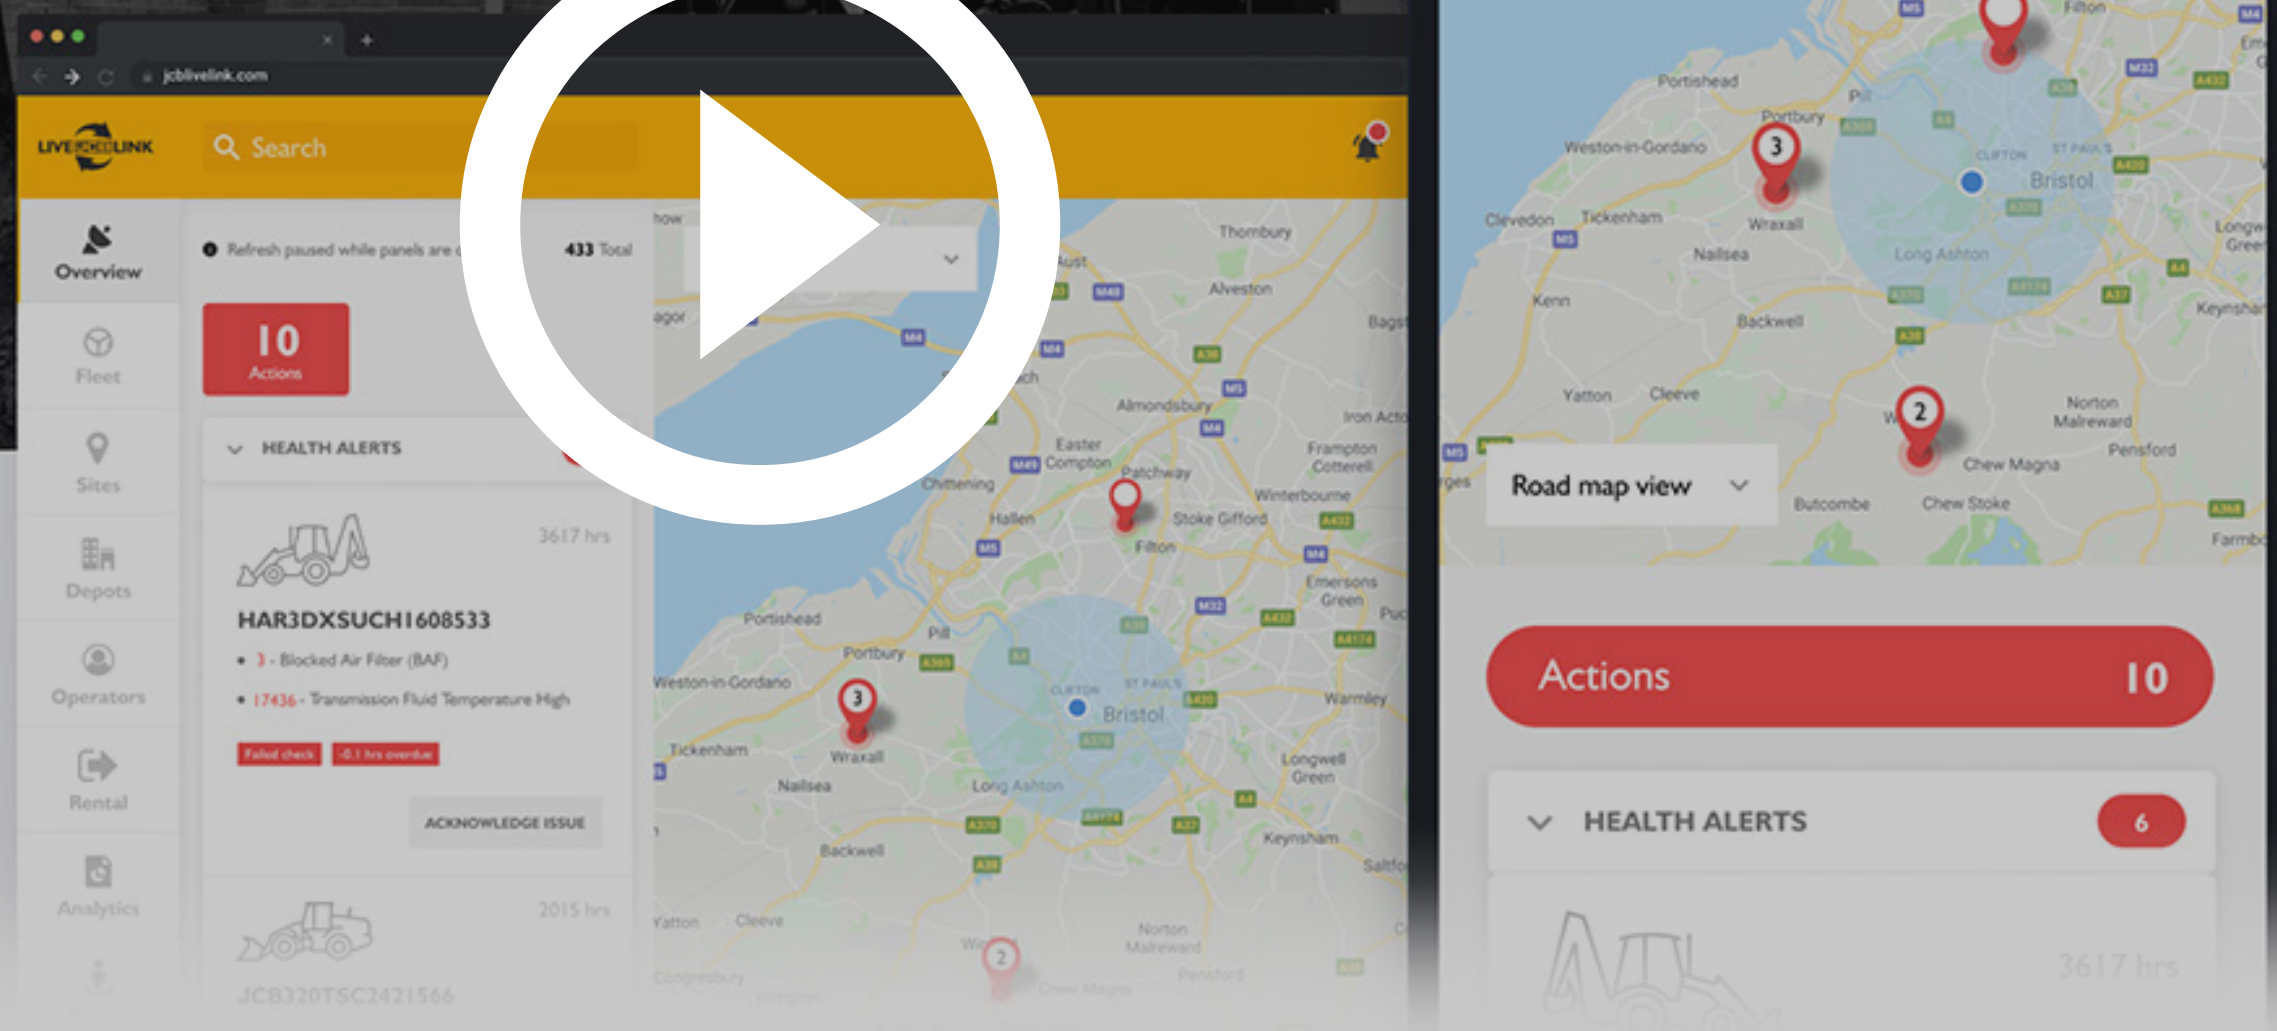

Things that are important to me...

- Fuel consumption
- Running costs
- Machine uptime and reliability

COMPLETE CONTROL
